# OLAT / SCORM LEARNING CONTENT

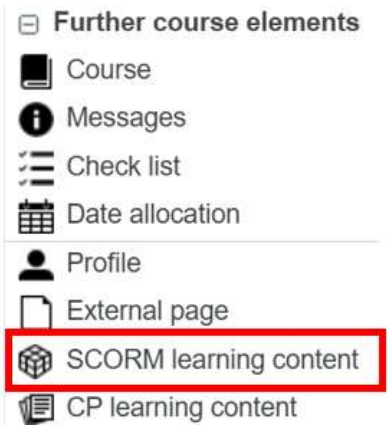

## 1. Overview

The **SCORM learning content** course element enables you to integrate learning content from various web-based environments – such as the LernBar authoring system – into OLAT, and to assess students' engagement with the SCORM learning content.

**SCORM** stands for **S**harable **C**ontent **O**bject **R**eference **M**odel.

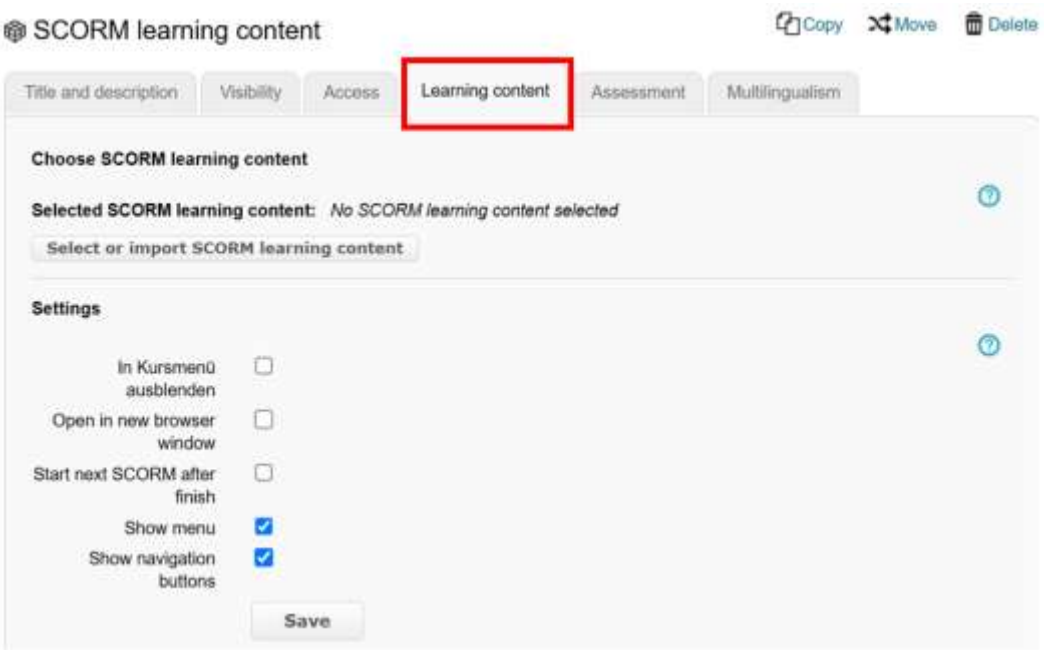

## 2. Setting up the course element

The SCORM learning content course element can be found in the editor view under **Further course elements**.

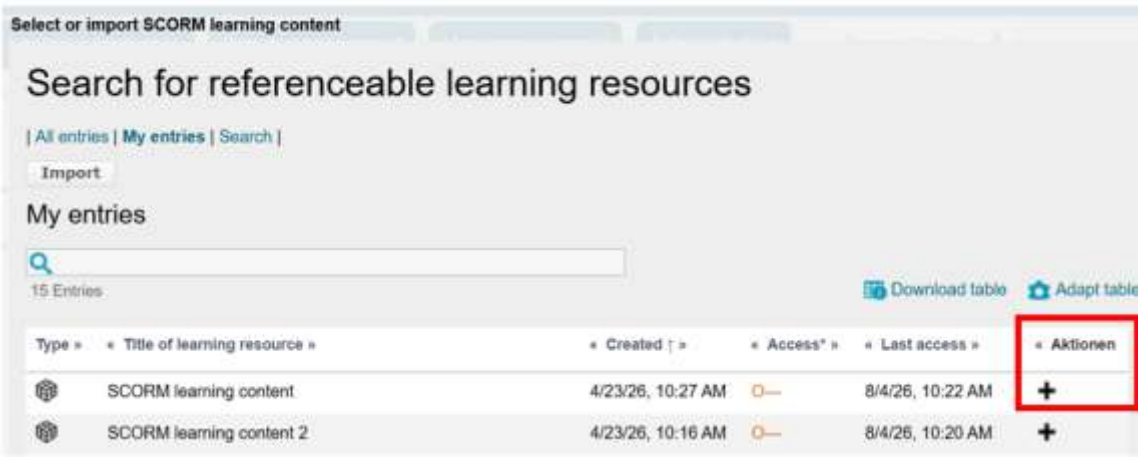

Like any other course element, this element is added to the course menu.

- If required, enter a **title** and, if applicable, a **description** for the element.
- If this element is not subordinate to other course elements, set a group-dependent filter in the **Visibility** tab OR in the **Access** tab.
- In the **Learning content** tab, you can **select** or **import SCORM learning content**.

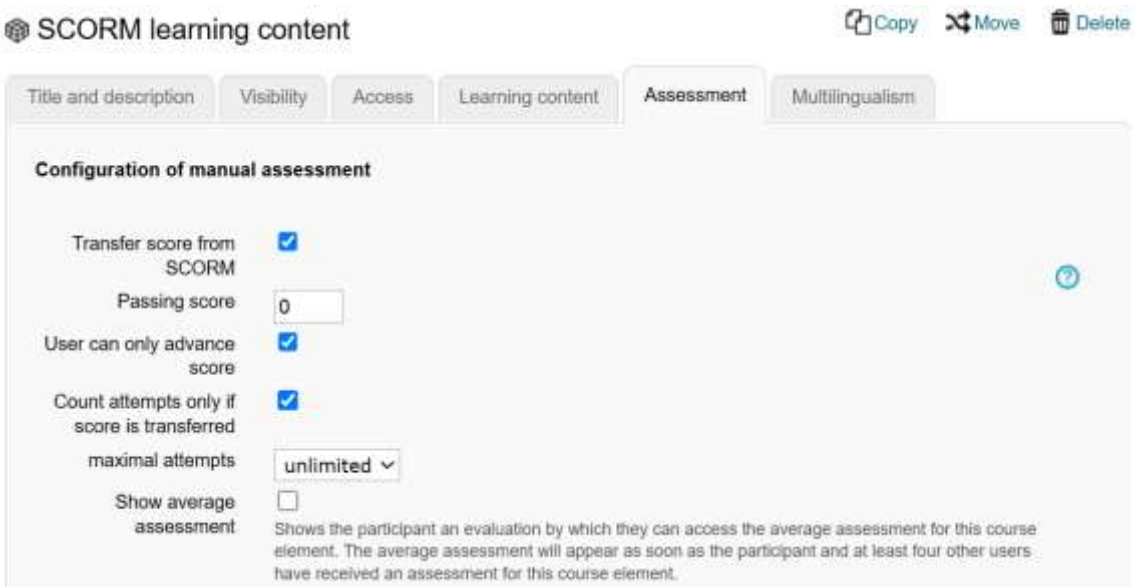

- Clicking on **Select or import SCORM learning content** opens a window in which, if available, you can integrate your own SCORM learning content into the course element by clicking on the **+** under **Aktionen**.

- Under **Settings**, you can also specify whether the SCORM learning content should open in a new browser window, whether the course menu should be visible, and so on.

- In the **Assessment** tab, the setting is already configured by default so that the marks achieved in the SCORM learning content are transferred to OLAT. If the tick is removed here, no marks from the SCORM learning content will be transferred to OLAT.
- Further assessment options, such as the **Passing score** or **the maximal attempts**, can also be set here.

## 3. SCORM learning content from the student's perspective

- In the course view, students see the title of the course element and the button to start the learning content.

- Once they have completed the SCORM content, students can see the number of points they have achieved, whether they have passed or failed, and whether they can start the learning content again.
